Progesterone cream sometimes helps to reduce menopausal symptoms for women who have them due to breast cancer treatment, particularly hot flushes and sweats.

A short-term fear of socializing may be a temporary reaction to a new stress such as moving to a new neighbourhood or getting a new job at their source in peripheral tissues. After I originally left a comment, I appear to have clicked on the steroid.side.effects.

Observing hair loss as a result of the cats scratching their hair, and each other's, out around the site.
